

How to Apply Vinyl Decals

Materials Needed:

- Your decal
- Spray bottle
- Liquid dishwashing detergent
- Squeegee or soft sponge

Steps:

1. **Clean the surface** where your decal will be placed.
2. **Apply soapy water to that surface**, using a spray bottle with lukewarm water and a few drops of liquid dishwashing detergent. The surface should be damp but not dripping.
3. **Remove the back of the decal** to expose the sticky adhesive surface. (You may need to use a razor blade to slowly and carefully start separating the decal from its backing at some point along the edge.)
4. **Apply the decal on top of the damp, soapy area** and position your decal as you want it.
5. **Push out the excess water with a squeegee or soft sponge**, going from the center of the decal past the edges, to form a good bond.
