

Gas Pump Globe Assembly Guide

Your plastic body gas pump globe includes the following parts:

- Two 13.5" diameter glass globe lenses
- The plastic body (2 halves)
- 3 screws and 3 nuts

To assemble, you will need:

- A small-blade screwdriver that fits the screw head securely
- One box – about the size of a file folder box
- A blanket for cushion

Steps to assemble:

1. Lay parts out.

2. Fold the blanket and lay over the top of your box.

3. Set one half of the globe body onto the blanket in the box.

Continue on reverse →

4. Set the lenses one at a time into the channel of the globe body. (Line up the notch in the glass to the raised 'bump' that is in the channel of the globe body.)

5. Gently set the second half of the globe body over the lenses, being careful that both lenses slip into the channel of the globe body.

6. Slip the three screws into the openings. Then attach the nuts and tighten.
